**Life Blue Tube Air™ hands-free headset incorporates:**

- Durable & advanced electronic components.
- A sleek and sophisticated design.
- The new standard by which all new headsets will be measured.

**The Life Blue Tube Air™ hands-free headset:**

- Is the world's first headset to be developed using a technology that sends the sound through an air tube to reduce radiation.
- Utilizes a state-of-the-art SPL enhanced sound chamber.
- Delivers a crystal clear sound through an air-filled wireless tube (*similar to a doctor's stethoscope*).
- Reduces the possibility of radiation from reaching your head.

Conventional headsets use wire to deliver sound to the earpiece and may also deliver electromagnetic radiation directly to your head.

Anti-radiation air-tube headsets deliver clear sound through an air-filled wireless tube, which reduces the possibility of radiation from reaching your head.

We have tested the radiation at the phone and it is dangerously high. We then tested the radiation at the Life Blue Tube headset and the radiation measured **ZERO!**

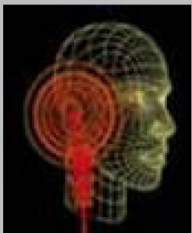

**You make the choice!** To protect your brain, and for driver safety and convenience, tens of thousands have purchased these headsets.
